

The SMBX1...64 *.WLD file specification

Reverse-engined by Wohlstand 02/16/2014

This is a world map and episode settings coding file. The file is saved in a text format. All parameters are written sequentially with separating by CRLF new-line character (This file format requires CRLF line feed only and LF-only file will cause crash of SMBX).

Introduction

Standard parameters:

Max world size:	10000x10000 tiles
Size of one tile:	32x32 pixel

Limits:

Tiles:	20000
Paths:	2000
Music-Boxes:	1000
Scenery:	5000
Levels:	400

Level coordinate space

All elements of a level: tiles, paths, sceneries, level entrances, music boxes are in united space. Coordinate system has a pixels units.

X axis is directed from left to right.

Y axis is directed from up to down.

Minimal and maximal values of X and Y are equal to “Double” C/C++ type.
