- The standard size of one section zone is 29999×29999 pixels
- Y is always equal to X as Section center coordinates
- where x=0 and y=0 – is a center of 11'th section.

For converting from absolute coordinates to the relative of center by one section:

$$X_{n-section} = X_{absolute} - X_{Current\ section\ center}$$

$$Y_{n-section} = Y_{absolute} - Y_{Current\ section\ center}$$

The section size and position are defined by the position of each side of the section. height and width are calculated with a formula:

$$W = |L-R| \quad H = |T-B|$$

The coordinates of an object's placement is set concerning its upper left corner:

In this example, the mushroom's coordinates on the current section is: X=2150; Y=2600 and the block coordinates are: X=2150; Y=2632

Remember!

As the Y axis is turned to move an object down, it is necessary to add to the Y offset and to move up, it is necessary to subtract.
